

Om Panjwani

Frontend Developer · React · JavaScript
+91 8770228448 · ompanjwani77@gmail.com · linkedin.com/in/ompanjwani · github.com/panjwaniom

Frontend Developer with hands-on experience building responsive web applications using React and JavaScript. Skilled in REST API integration, component-based architecture, and performance optimization. Developed multiple projects focused on scalable UI and seamless user experience, with an emphasis on clean, maintainable code.

SKILLS

Languages	JavaScript (ES6+) · TypeScript · Java · Python
Frontend	React · HTML5 · CSS3 · Tailwind CSS · Bootstrap · REST APIs · Responsive Design · Component Architecture
Tools	Git / GitHub · Chrome DevTools
Backend	Node.js · Express.js · MySQL

PROJECTS & FREELANCE WORK

- Freelance Developer (Remote)** · React · HTML/CSS · JavaScript · REST APIs
- Delivered frontend projects for multiple independent clients including a local retail business and two student-led startups, providing **responsive, mobile-friendly interfaces**.
 - Rebuilt client landing page in **React**, cutting load time from **3.2s to 2.1s** and improving engagement and bounce rate.
 - Integrated **REST APIs** to enable real-time data rendering without page reloads.
 - Enhanced UI responsiveness across devices, improving mobile usability scores by **~25%** (Lighthouse).
 - Refactored legacy HTML/CSS into reusable **React components**, cutting future update time by **~35%**.
 - Maintained consistent delivery timelines across all projects with clear client-facing documentation.

- Task Manager Web App** · React · Node.js · MySQL · Express.js · GitHub
- Architected a full-stack task management system with secure **JWT-based authentication** and persistent session management.
 - Developed a **React** frontend with dynamic state, connected to a **Node.js/Express** API with **MySQL**.
 - Reduced UI bugs from **15 to 8 per sprint** through systematic input validation and error boundary implementation.
 - Published repository with structured commits and documentation on **GitHub**, demonstrating clean version control practices.

- Weather & News Dashboard** · React · TypeScript · REST APIs
- Engineered a real-time dashboard in **React + TypeScript** consuming **OpenWeatherMap** and **NewsAPI**, delivering live forecasts and categorized news feeds with end-to-end type safety across all API contracts and component interfaces.
 - Implemented debounced search, typed error boundaries, and granular loading states to ensure a resilient experience on degraded network conditions.
 - Reduced redundant API calls by **~40%** using smart caching and conditional re-fetching via custom **React** hooks.

- Personal Developer Portfolio** · React · JavaScript · CSS3
- Architected a **macOS-inspired portfolio UI** with draggable windows, a functional dock, traffic-light controls, and a native menu bar - replicating a full desktop OS experience entirely in **React**.
 - Engineered smooth **window layering, z-index management, and drag interactions** from scratch, delivering an interface that feels native without any OS-simulation libraries.
 - Achieved a **Lighthouse performance score of 92+**, optimizing asset loading and eliminating render-blocking resources across a visually complex, animation-heavy layout.

EDUCATION

Degree	Institution	Score
Bachelor of Computer Applications (BCA)	Maharaja Agrasen Himalayan Garhwal University	6.4 / 10
Higher Secondary (XII)	Delhi Public School, Dhamtari	67.6%
Senior Secondary (X)	Brighton International School, Raipur	76.4%

INTERESTS

Building and refining personal React projects · Following frontend engineering blogs and changelogs · Participating in developer communities on GitHub and Discord · Experimenting with UI animations and micro-interactions
